goFrendiAsgard, someone just posted a reply to a topic you subscribed to at: CodeIgniter Forums The title of the thread is: No-CMS, A Free CodeIgniter based CMS to start your project The post of [http://codeigniter.com/forums/viewreply/1021672/](#) If you have Smart Notifications enabled, you will receive any further notifications until you visit the topic: [http://codeigniter.com/forums/viewthread/1021672/](#) To turn off notifications for this topic, click here: [http://codeigniter.com/?ACT=50&id=271755](#)
Title: No-CMS, A Free CodeIgniter based CMS to start your project Message: Is this module?

When?

- Someone post message reply in a forum
- Password reset notification
- Malicious activity occurred
- Newsletter (Monthly)
- Event

The CodeIgniter Way

- E mail Class:

http://codeigniter.com/user_guide/libraries/email.html

Controller (Example)

```
<?php
class Blog extends CI_Controller {
    // constructors and other functions

    function send_mail()
    {
        $this->load->library('email');

        // e mail configuration
        $config['protocol']    = 'smtp';
        $config['smtp_host']   = 'ssl://smtp.googlemail.com';
        $config['smtp_port']   = 465;
        $config['smtp_user']   = 'trial.cobain.2012@gmail.com';
        $config['smtp_pass']   = 'iseethelight';
        $config['smtp_timeout'] = 30;
        $config['newline']     = "\r\n";
        $config['crlf']        = "\r\n";
        $config['mailtype']    = 'html';
        $config['charset']     = 'utf-8';
        $this->email->initialize($config);

        // parameters
        $this->email->from('trial.cobain.2012@gmail.com', 'Tono');
        $this->email->to('gofrendiasgard@gmail.com');
        $this->email->subject('Hello');
        $this->email->message('Halo, ini email dikirim tono');

        $this->email->send();

        // debugging result
        echo $this->email->print_debugger();
    }
}
?>
```

It's your turn

Thank you
